SUMMARY

B.Tech CSE student at Lovely Professional University who likes building practical AI apps, mainly RAG assistants, semantic search and computer vision with Python, FastAPI and React. Looking for an AI/ML internship to work on real problems.

SKILLS

- **Languages:** Python, C++, Java, JavaScript, SQL
- **Frameworks:** Flask, FastAPI, React, Next.js, Streamlit
- **AI/ML:** Machine Learning, Deep Learning, NLP, Computer Vision, RAG, Semantic Search
- **Libraries:** TensorFlow, Scikit-learn, OpenCV, NumPy, Pandas, Matplotlib, spaCy, Sentence-Transformers
- **Databases:** PostgreSQL, pgvector, FAISS (Vector Search)
- **Tools/Platforms:** Git, GitHub, Ollama, Tesseract OCR, VS Code
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, REST APIs

PROJECTS

WisdomLens – Intelligent Knowledge Assistant | [GitHub](#)

August 2026

- Built a chat-based **AI knowledge assistant** that answers questions from a stored text knowledge base.
- Used **semantic search** with Sentence-Transformers and FAISS to find the most relevant passages across **800+ text chunks**.
- Set up a **Retrieval-Augmented Generation (RAG)** pipeline that gives the model retrieved context for grounded answers.
- Ran **Llama 3.2** locally via Ollama with a **FastAPI** backend and **React** frontend, giving **bilingual answers**.
- Kept retrieval, generation and the chat UI as separate parts behind a REST API, so each can change independently.
- **Tech:** Python, FastAPI, React, FAISS, Sentence-Transformers, Ollama

LifeLens AI – Multimodal Personal Knowledge System | [GitHub](#)

May 2026

- Built a **multimodal knowledge system** where documents, notes and images can be stored and searched in one place.
- Used Tesseract OCR, spaCy and Sentence-Transformers for **text extraction and processing**, so uploaded files become searchable.
- Wrote the **search and question-answering** feature with FastAPI and **pgvector** to find relevant information across uploaded files.
- Stored embeddings and metadata in **PostgreSQL**, which keeps similarity search fast across different file types.
- Made a responsive **Next.js** frontend where users can upload files, search content and view results.
- **Tech:** Python, Next.js, FastAPI, PostgreSQL, pgvector, Tesseract, spaCy

VisionDetect – Real-Time Object Detection System | [GitHub](#)

January 2026

- Built a **computer vision application** that detects objects and people in uploaded images and videos.
- Used **YOLO with OpenCV** to identify different objects and person categories in images and video frames.
- Added **real-time detection** through the camera, which picks up things like phones, bottles and people.
- Videos are processed frame by frame, and each detection is shown with a bounding box and class label.
- **Tech:** Python, OpenCV, YOLO

CERTIFICATES

- **Career Essentials in Business Analysis** | Microsoft & LinkedIn February 2026
- **Responsive Web Design** | freeCodeCamp September 2025
- **Career Essentials in GitHub Professional Certificate** | GitHub September 2025
- **Career Essentials in Generative AI** | Microsoft & LinkedIn August 2025

ACHIEVEMENTS

- Secured **Rank 1** in an **IoT project** competition at college.
- Secured a rank in a **college-level hackathon**.
- Completed **four professional certifications** from Microsoft, LinkedIn, GitHub and freeCodeCamp.

EDUCATION

Lovely Professional University

Bachelor of Technology - Computer Science and Engineering; **CGPA: 7.0**

Punjab, India

2024 - 2028

DAV Public School, Medical Unit

Intermediate; **Percentage: 76%**

Gaya, Bihar

April 2021 - March 2023

DAV Public School, Medical Unit

Matriculation; **Percentage: 82%**

Gaya, Bihar

April 2020 - March 2021
